FOR IMMEDIATE RELEASE

Gatekeeper Announces Release of New High Resolution Digital Recorder for Maritime, Airborne and Land Markets

Abbotsford, BC September 9th, 2013 - Gatekeeper Systems Inc. (“Gatekeeper” or the “Company”) (TSX.V: GSI) is pleased to announce the release, under Gatekeeper’s brand Viperfish®, of its new high resolution digital recorder for maritime, airborne and land markets.

The new Viperfish MSX 4 records up to four high resolution video or FLIR (Forward Looking Infrared) sensors and synchronizes them with voice, GPS and meta data to a ruggedized platform designed to meet various military specifications. The system includes a bundled post mission analysis software application that is used to create case files for potential prosecution.

President and CEO, Doug Dymont stated, “Homeland security and defense applications require various types of forward looking sensors for short, medium and long range detection and identification. The Viperfish MSX 4 is small, light-weight, and designed to precise military specifications. The MSX 4 records all data from various sensors allowing authorities to quickly review and confirm activity during operation. Surveillance applications require clear video at full frame rate in order to determine what their sensors were scanning.” Dymont added, “ The new Viperfish MSX 4 integrates with most sensor systems used in maritime, airborne and land applications, which adds to our product line, allowing us to build out our customer base which currently includes Boeing Aerospace, United States Air Force and other national defense contractors”.

About Gatekeeper Systems Inc.

Founded in 1997, Gatekeeper Systems Inc. has provided total mobile video security solutions to over 3,500 customers and has installations in every state and province in North America. Customers include school districts, public transit, law enforcement and military.
