

Y724 firmware version T200622.03

This document is the technical bulletin for Y724 firmware version T200622.03. It includes recommended configuration for this Y724 firmware.

1. Camera Connections

- Channels 1-16 must be connected directly to the Y724. Channels 17-24 must be connected to a switch.
- In this version of firmware, the fast setup feature will only work on the cameras that are connected to the switch.
- After upgrading Y724 to this firmware version, the IPC settings must be reset to default so that the cameras will connect to their respective channels. Otherwise, duplicate channels will occur due to multiple cameras having the same IP address.

2. Assign Cameras using Static IP

- IP cameras need to be set to static IP mode with this firmware version. Y724 cannot detect IP cameras that are set to DHCP mode.
