

STOP ARM SYSTEM BUNDLE

Gatekeeper is pleased to present this Stop Arm System Bundle. The bundle allows school districts to implement Gatekeeper's industry leading stop arm solution. It consists of 3 cameras and a DVR. The capture of vehicle license tags is done using Gatekeeper SP25 Stop Arm Camera. With a total of 10 Mega Pixels at 30fps, the forward and rear facing cameras reliably capture the license tag of vehicles out to lane 4. The cameras have been specifically designed to provide blur free images in all lighting conditions. From bright summer days through to dark winter nights.

SP25 CAMERA

GATEKEEPER DVR

AI282 CAMERA

The AI282 camera utilizes Artificial Intelligence (AI) to detect vehicles as they enter the camera's detection zone when the stop arm is deployed. When this condition exists, DVR recording is automatically triggered. This functionality ensures that video is captured only when a stop arm event takes place. This reduces the quantity of video that is recorded or transmitted wirelessly and

the number of video events that a video analyst must review to identify incidents. AI282 and SP25 require Gatekeeper's DVR for recording the videos. Video is reviewed and clipped using Gatekeeper's G4 Viewer Plus software. G4 Viewer Plus is included in the bundle as well.

NOTE:

- It is strongly recommended to NOT add additional cameras to this bundle
- The SP25 is a 10 MP unit and when set to 30 fps produces considerable data
- Additional cameras will take up more storage
